Professional Summary

Results-oriented Computer Science and Engineering undergraduate with hands-on experience developing full-stack web applications, Python backend services, and interactive software systems. Proficient in Python, JavaScript, FastAPI, PostgreSQL, and GDScript, with demonstrated expertise in building secure RESTful APIs, modern user interfaces, and algorithmic utility tools. Adept at applying core Computer Science principles to solve real-world problems and eager to contribute as an entry-level Software Engineer.

Technical Skills

- **Languages:** Python, JavaScript (ES6+), C, GDScript, Dart, SQL, HTML5, CSS3
- **Backend & Databases:** FastAPI, RESTful APIs, PostgreSQL, Supabase (Auth, RLS), MySQL, JSON
- **Frameworks & Engines:** Godot Engine (2D Kinematics), Flutter, Node.js (Basics), Progressive Web Apps (PWA)
- **Developer Tools:** Git, GitHub, VS Code, Postman, Windows Terminal, Chrome DevTools
- **Core Competencies:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Design, Prompt Engineering

Internships & Industry Training

Scipy Technologies Kerala, India
Web Development Intern *June 2025 – June 2025*

- Engineered responsive web interface modules utilizing semantic HTML5, CSS3 flexbox/grid, and modern JavaScript.
- Implemented client-side scripting routines, DOM manipulation algorithms, and modular form validation logic.
- Adopted professional software development workflows, standard Git version control branching, and code quality reviews.

Technical Projects

V-BOT: Neural Transformer Language Model & Custom BPE Tokenizer GitHub: V-BOT
PyTorch, Byte-Level BPE, Autoregressive Transformer, Python *Deep Learning Systems*

- Architected a decoder-only GPT transformer from scratch in PyTorch (causal multi-head self-attention, Pre-LayerNorm, GELU) paired with a custom Byte-Level BPE tokenizer (2,048 vocab) achieving ∼5.2x sequence compression with zero [UNK] tokens.
- Constructed an end-to-end training pipeline utilizing decoupled AdamW weight decay, cosine annealing with linear warmup, gradient norm clipping (≤ 1.0), and dual-domain balanced SFT batching with prompt masking (`ignore_index = -100`).
- Engineered an interactive terminal interface (TUI) featuring real-time token streaming, live telemetry (tokens/sec throughput), in-terminal runtime parameter controls (`/temp`, `/tokens`), and automatic model checkpoint hot-reloading.

AttendWise: College Attendance Tracker & Risk Calculator GitHub: AttendWise
JavaScript, Supabase, PostgreSQL, Progressive Web App (PWA) *Full-Stack Web App*

- Architected a responsive cross-platform PWA to track subject-wise student attendance and mitigate academic detention risks.
- Engineered a predictive **Recovery Calculator** algorithm computing exact consecutive classes needed to satisfy critical thresholds (75%/80%).
- Integrated Supabase Authentication and a PostgreSQL relational database enforced with Row-Level Security (RLS) policies for multi-tenant data privacy.

Easeprompt: Meta-Prompt Generation & Optimization Engine GitHub: Easeprompt
Python, FastAPI, LLM Prompt Engineering, Glassmorphism UI *AI Backend Service*

- Developed an automated prompt expansion engine converting unstructured user inputs into production-grade prompts using the ART (Act as, Request, Terms) framework.
- Constructed an asynchronous FastAPI backend paired with a deterministic heuristic fallback engine and quality scoring validation.
- Crafted a responsive web interface featuring dynamic parameter tuning, live structured previews, and instant clipboard exports.

NutriDecide: Food Nutrition Analyzer & Decision Platform GitHub: nutridecide
Python, REST APIs, Data Processing, JavaScript, Modern UI *HealthTech Web Service*

- Engineered an automated nutrition assessment engine parsing ingredient profiles and nutritional facts to deliver suitability recommendations.
- Implemented algorithmic scoring routines evaluating dietary thresholds and macro balances to assist users in making informed dietary choices.

NutriCalc: Dynamic Calorie & Macro Intake Calculator GitHub: nutricalc
JavaScript, Algorithmic Modeling, Responsive Web Design *Health Utility Tool*

- Developed a biometric calculation utility computing BMR, TDEE, and optimal macronutrient distributions using standard metabolic formulas.
- Engineered an interactive user interface with real-time reactive calculation updates, custom dietary goal presets, and structured breakdowns.

M.A.N.I.: Personal AI Desktop Assistant (Mark VII) GitHub: m.a.n.i.-AI-assistant
Python 3.10+, SpeechRecognition, Pyttsx3, Windows Automation API *Desktop Automation*

- Developed a voice-activated Windows desktop assistant for hands-free system process control, web automation, and conversational tasks.
- Engineered a continuous conversational listening mode with a 10-second active window, enabling context-aware follow-up dialogue without wake-word repetition.

Blackout: Interactive 2D Platformer Game GitHub: blackoutgame

Godot Engine, GDScript, 2D Physics & Kinematics *Game Engineering*

- Engineered a 2D platformer game utilizing Godot Engine, implementing custom kinematic physics, velocity curve jumping, and collision detection.
- Developed event-driven state transitions, modular scene tree hierarchies, and dynamic camera tracking routines via GDScript signals.

Education

College of Engineering Karunagappally (KTU) Kerala, India

B.Tech in Computer Science and Engineering *2023 – Present*

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems (DBMS), Operating Systems, Object-Oriented Programming (OOP), Computer Networks.

VPMSNDP HSS Kazhimbram (DHSE Kerala) Kerala, India

Higher Secondary Education – Biology Science (90.58%) *2020 – 2022*

Certifications & Leadership

- **Certifications:** Introduction to AI Concepts (Microsoft Learn)
- **Leadership & Volunteering:** Volunteer Coordinator at FOSS FEST 2025; Active Delegate at ICGAIFE 3.0

Languages

English (Professional), Malayalam (Native), Tamil (Conversational)
